

# Safe Stove Design

## Inversiones Falcon

Dear Erin,

Safety is one of my priorities when designing stoves. I send some pictures of the stove models sell more and one of the reasons for our success in sales is safety. See pictures of my stove with safety future.

The yellow mesh and the galvanized sheet is to protect from burn and radiation while people use the stove. The combustion chamber is a rocket that I tested last year in Guatemala with some people from Aprovecho. I have one round stove 50 cm diameter and another one that you can see in this pictures which is 50 x 70 cm with burners on top of the plate.

Best regards, Gustavo Pena [invfalcones53@yahoo.com](mailto:invfalcones53@yahoo.com)
